v2.1.1

- [VIC-761] prevent invalid cards from scanning of qr codes

v2.1.0

- [VIC-704] add two new Screens to Tutorial (NFC and Barcode)

v2.0.0

Breaking changes

- [VIC-641] Rewrite user customization settings. Whereas the language, card-images and swipe switch are still defined in the VicSettings Object, all other possible android customizations can now be set in an xml file under the `/res/values` folder of the application. the User can now customize even more aspects of the SDK, from background colors, font family/size and so.
 - Please be aware that this is a breaking change from the previous version. The new customization settings are fully explained in the documentation, please refer to that to know more.

New Features

- [VIC-719] In VicSettings the swipe-function can now be switched off and on.
- [VIC-717] When swipe-function is switched off, the cards are selected by number in a slider.

v1.2.0

- no changes

v1.1.7

- Correctly show invalid/blocked cards
- Fixed bug related to fingerprint no longer being required

v1.1.4

- Fingerprint sensor is no longer a hard-requirement

v1.1.3

- [VIC-684] handle invalid and blocked cards
- Display correct image when selecting a card after deeplink (NFC or QR scan from system camera)

v1.1.2

- [VIC-646] add new method 'fetchCards' with cards array as callback fun `fetchCards(context: Context): Observable<Array<Card>> {...}`
- Added more translations
- parsing of AHV number

v1.1.1

- Fixed Bug in Date Parsing
- Changed Gender Display to show value in card data

v1.0.0

- Release initial version of the Vic Android SDK
